

SABLEFISH – Sexing and Marking

MALES

Look for **lobes** that have an 'edge' to them. Due to the 'edge', they will not 'roll' easily in your fingers. The lobes are fused together at the end closest to the head.

Mark with **one** cut on the gill cover

Sample photos for color and shape reference:

Juvenile: translucent-white

Developing: creamy-white

Post Spawning: brown or tan

FEMALES

Look for **tubes** that are oval in cross section and will 'roll' in your fingers.

Mark with **two** cuts on the gill cover

Sample photos for color and shape reference:

Juvenile: translucent pinky purple

Developing: creamy white, filled with eggs

Post Spawning: reddish- purple- brown, whitish sheen to the exterior surface

NOTE: If sex can NOT be determined, leave the fish head **unmarked**.

Juveniles can be tough to sex. If you are unsure do not mark the head
